Real rhesus macaque GI cohort: 148 samples, 18-species/303-cluster monkey MAG panel

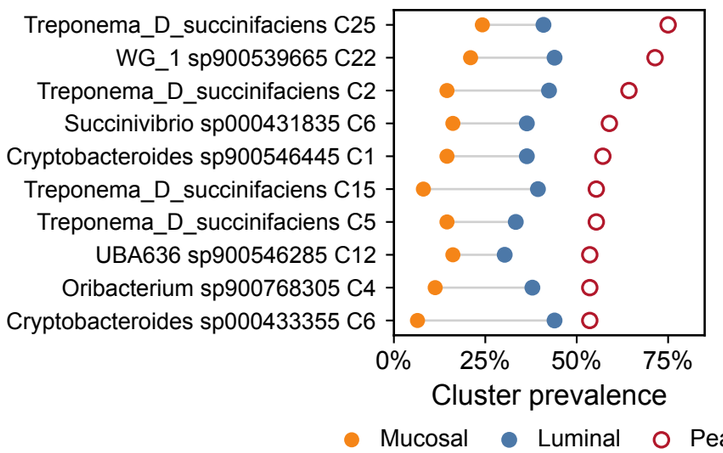

A 128 GI spatial samples plus 20 body controls

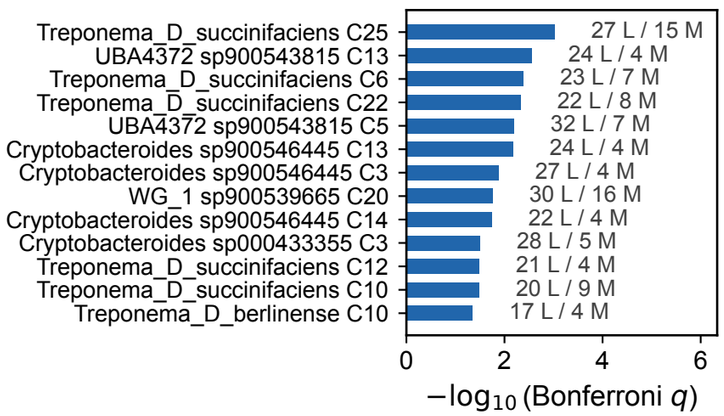

B Species recovery and body-control specificity

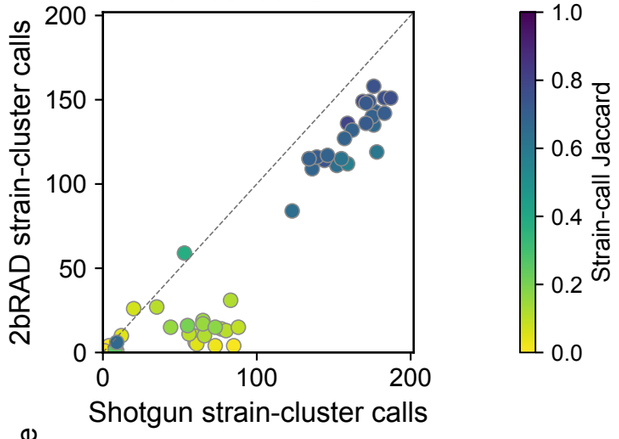

C LI-enriched strain clusters (n = 89 total)

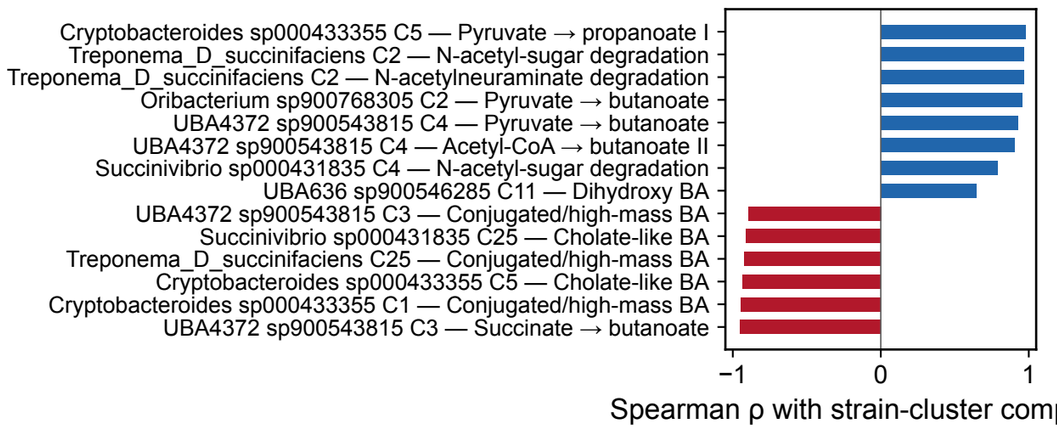

D Matched mucosal/luminal tests (13 Bonferroni q < 0.05)

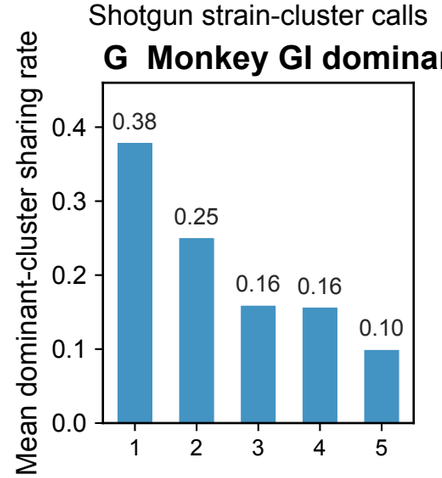

E Paired calls

F LI strain-cluster coupling to BA and functions

G Monkey GI dominant-cluster sharing contrasts

1 Within monkey
2 Within mucosal/luminal
3 Same age/site
4 Old/young site
5 Between regions

H Old/young corresponding GI sites
